

Best practice process when installing a solar system

Solar installation best practice process

A clear 7-phase journey from quote to a safe final switch-on

Approvals and meter setup happen before export

Your goal is simple: a compliant system, a suitable meter, and a safe final switch-on.

Compliant

Meets network and safety requirements.

Optimised

Ready for solar export and night-rate benefits.

Safe

Inspection passed and meter upgraded before turn-on.

Profitable

Start earning from your solar exports.
