YOUR POWER BILL AFTER SOLAR

See how solar can reduce your power bill all year round

Estimated annual savings: \$1,000

Most savings are achieved during the warmer months.

In winter, dollar savings may be minimal due to year-to-year electricity price variations.

The best way to assess your solar system's performance is to compare your kWh usage year-to-year, rather than the dollar cost of your bills.

Choose a power retailer with a cash-out policy, if your power bill goes into surplus.
